

**Amendments to the Specification**

Please amend the paragraph on page 9, line 19 through page 10, line 3 with the following re-written paragraph:

--To assist in retaining the eyepieces 12, 14 against the face of the user, each eyepiece can optionally have an adhesive layer, such as the illustrated adhesive tape layer 28 (FIGS. 2 and 3), overlaying the posterior surface 26. Each adhesive tape layer 28 can be conventional "double-sided" or "double-coated" tape having a first adhesive surface 30 secured to the posterior surface 26 of the respective eyepiece and a second adhesive surface 32 that is placed against the skin of the user. Each eyepiece 12, 14 can include a removable, protective cover layer (not shown) overlaying the second adhesive surface 32 of the tape to protect the second adhesive surface from adhering to extraneous matter prior to use. In certain embodiments, the eyepieces can be provided with two pieces of double-sided adhesive tape that are shaped to be applied to the posterior surfaces of the eyepieces and a set of instructions for informing a user how to apply the tape to the eyepieces.--
